

## GO BEYOND SOLAR WITH SMART BUILDING UPGRADES

### Building Initiatives Deliver Instant Results for Local Manufacturer in Fullerton, CA

Energy remains one of the biggest operating costs for most industrial facilities in SoCal. For one manufacturer of aerospace components, demand-related charges and peak pricing were hurting their bottom line.

Their solution was to install solar while federal tax incentives were still available – however, their new smart building doesn't stop there! With an additional battery storage system and energy management software, their site can avoid costly demand-related charges – ultimately saving thousands every month on their bill.

#### Project Highlights

- 1 Solar generates 75% of daily energy needs
- 2 On track to meet 60-month ROI
- 3 Building now ISO14001 Compliant

### Discover How To Get the Most Out of Your Energy

With smart building upgrades, your site can enjoy reliable and sustainable energy while avoiding costly demand related charges – meaning incredible savings on your monthly electric bill.

**Solar energy** delivers energy at a reduced cost

**Battery storage** helps shed energy demand during peak pricing

**Software** monitors usage and optimizes energy distribution
